DETAILED ACTION

Election/Restrictions

Claims 28-60 are withdrawn from further consideration pursuant to 37 CFR
 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 2 September

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not describe how the drag force provides substantially all of the energy for movement of the binding member. Also, it is unclear if the "the movement" is the rotation of the binding member or the sliding of the needle.

2.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/580,878

Art Unit: 3767

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Page 3

4. Claims 1-13 and 15-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Gaba (US 5,697,907).

Gaba teaches (see Fig 9 and 13-15):

A needle hub (202) having a needle cannula (132, Fig 13); and at least one shield (340),

The shield including a binding member (348) defining binding surfaces (362) that form an aperture,

The binding member including at least one drag inducing member (356, 358, and 364), a blocking member (352);

The binding member further including a needle communicating surface (360),

A retainer for engagement with the needle hub (see friction fit of shield with hub, Fig 8),

The binding member further including a binding member reset surface (354) alingable with a reset surface (232).

As to claim 2, see cavity 364. As to claim 3, see plate 356. As to claim 4, see arms 358 and 360. As to claim 5, 13 arm 360 is deflectable. As to claims 6, 15, 16, 17 see Fig 13-14. As to claim 7, 8 see blocking member 352. As to claim 9, see bearing 346, which causes the shield to rotate relative to the binding member. As to claim 10, see handle 202/294, Fig 9. As to claim 11, 12, 22 see Fig 8-9. As to claim 18, the spring 352 pinches the reset surface (232) and binding member reset surface (354) together (Fig

Art Unit: 3767

13), thereby urging the reset surface towards the binding member reset surfaces. As to claim 19, see taper 222. As to claim 20, see sheath 350. As to claim 21, 23 see guide 344. As to claims 24, 26, see funnel 144 on shield 300. As to claim 25, see detent 326, Fig 10. As to claim 27, see stop 344.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gaba as applied to claims above, and further in view of Dombrowski et al (US 4,978,344).

 Gaba does not teach multiple shields. Dombrowski teaches a shield (34) with sheath (50"). See Fig 7. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include multiple shield to protect the user from both the tip of the needle and from residual fluids on the sides of the needle.

Response to Arguments

1. Applicant's arguments filed 8 January 2010 have been fully considered but they are not persuasive. Applicant argues that Gaba does not teach a blocking member as claimed. There is nothing in the specification limiting what can be considered a blocking member and the spring 352 prevents or blocks the binding member from rotating clockwise, thus it can reasonably be called a blocking member.

Art Unit: 3767

Conclusion

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ELIZABETH R. MOULTON whose telephone number is (571)272-9970. The examiner can normally be reached on part-time R and F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571) 272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
